 - SAFe 5 certified Scrum Master
-

Experience

ECS Federal - USPS Contract / Web Developer/Scrum Master

August 2018 - PRESENT, Norman, OK

Work in a group of 8 other developers in a SCRUM environment. We use 2 week to 4 week “Sprints” to focus on applications or individual user stories put forward by a product owner. This allows for us to have a quicker turnaround time on all user stories as well as any bugs that might come in.

Worked on a variety of applications and projects utilizing PHP, Javascript, jQuery, AJAX, HTML5, CSS, Oracle, and SQL.

Troubleshooted various issues as they arose in the field. Pushed updates to fix these bugs in a timely fashion to minimize the down time experience by field personnel.

Was assigned the position of Scrum Master in May 2019. Implemented new testing policies that reduced CAT (Customer Acceptance Testing) times by $\frac{1}{3}$.

Completely re-created our parts management software with a few data engineers to give the USPS field better control over parts and reporting.

Worked through our smaller PHP applications moving them to ServiceNow. Then created documentation on ServiceNow and distributed it through my team so they can begin moving projects into ServiceNow as well.

Teaching Textbooks / Technical Support Representative/ Web Developer

March 2015 - August 2018, OKC,OK

Collaborated with a team to develop an online application using HTML5, PHP, JavaScript, and SQL that would allow users to upload a grade book file. Once uploaded, they could then email the instructor, convert to .csv, convert to pdf, or print from the application.

Collaborated with a team to redevelop the internal Employment Resource Center. Resources used Bootstrap for styling and Codeignitor with the MVC layout.

Sole developer on a project to create a new system for our conference department to convert away from the original paper system. Project included setting up an XAMPP server for the department. Creating a relational SQL database.
